

Scenario-Based SQL Assignment: Shopping Store Database

You will use the following tables:

- 1 customers
- 2 orders
- 3 products
- 4 order_items

Question 1: Customer Order Tracking

- 1 Use a JOIN between customers and orders.
- 2 Match customers.cust_id with orders.cust_id.
- 3 Display customer name, order ID, and order date.

Showing rows 0 - 2 (3 total, Query took 0.0004 seconds.)

```
SELECT c.cust_name, o.ord_id, o.order_date FROM customers c JOIN orders o ON c.cust_id = o.cust_id;
```

☐ Profiling [\[Edit inline \]](#) [\[Edit \]](#) [\[Explain SQL \]](#) [\[Create PHP code \]](#) [\[Refresh \]](#)

☐ Show all | Number of rows: 25 | Filter rows:

Extra options

cust_name	ord_id	order_date
Ali	101	2025-01-10
Ali	102	2025-01-15
Ahmed	103	2025-01-18

Question 2: Order Content Review

- 1 Use orders, order_items, and products tables.
- 2 Join tables using ord_id and p_id.
- 3 Display order ID, product name, price, and quantity.
- 4 Use a WHERE clause to filter a specific order.

Showing rows 0 - 1 (2 total, Query took 0.0004 seconds.)

```
SELECT o.ord_id, p.product_name, p.price, oi.quantity FROM orders o JOIN order_items oi ON o.ord_id = oi.ord_id JOIN products p ON oi.p_id = p.p_id WHERE o.ord_id = 101;
```

☐ Show all | Number of rows: 25 | Filter rows:

Extra options

ord_id	product_name	price	quantity
101	Laptop	120000.00	1
101	Mouse	1500.00	2

Question 3: Customer Purchase History

1/27/2026

- 1 Join all four tables.
- 2 Filter data using a *WHERE* clause for one customer.
- 3 Display customer name, order details, and purchased products.

Showing rows 0 - 2 (3 total, Query took 0.0004 seconds.)

```
SELECT c.cust_name, o.ord_id, o.order_date, p.product_name, oi.quantity FROM customers c JOIN orders o ON c.cust_id = o.cust_id JOIN order_items oi ON o.ord_id = oi.ord_id JOIN products p ON oi.p_id = p.p_id WHERE c.cust_id = 1;
```

☐ Show all | Number of rows: 25 | Filter rows:

Extra options

cust_name	ord_id	order_date	product_name	quantity
Ali	101	2025-01-10	Laptop	1
Ali	101	2025-01-10	Mouse	2
Ali	102	2025-01-15	Keyboard	1

Question 4: Order Total Calculation

- 1 Use *SUM(price × quantity)* to calculate totals.
- 2 Apply *GROUP BY ord_id*.
- 3 Display one row per order.

Showing rows 0 - 2 (3 total, Query took 0.0005 seconds.)

```
SELECT o.ord_id, SUM(p.price * oi.quantity) AS order_total FROM orders o JOIN order_items oi ON o.ord_id = oi.ord_id JOIN products p ON oi.p_id = p.p_id GROUP BY o.ord_id;
```

☐ Profiling [\[Edit inline \]](#) [\[Edit \]](#) [\[Explain SQL \]](#) [\[Create PHP code \]](#) [\[Refresh \]](#)

☐ Show all | Number of rows: 25 | Filter rows:

Extra options

ord_id	order_total
101	123000.00
102	3000.00
103	4500.00

Question 5: Product Sales Analysis

- 1 Join products and order_items.
- 2 Use *SUM(quantity)* to calculate total units sold.
- 3 Group results by product name.

Showing rows 0 - 2 (3 total, Query took 0.0003 seconds.)

```
SELECT p.product_name, SUM(oi.quantity) AS total_units_sold FROM products p JOIN order_items oi ON p.p_id = oi.p_id GROUP BY p.product_name;
```
